Here's my updated class diagram. Amongst other things, I've cleaned up the layout, access visibility, and relationships between classes. This should hopefully make the diagram easier to read and follow.

Hi Shan,

The layout of the diagram makes it easy to read and navigate. However, I want to ask about the OrderModifier class? It is not clear reading the model on what its purpose is, so I'm wondering if the thinking is that this class to handle modifiers like "VAT", "Discount", "Free Products"? If yes, this is a brilliant concept!

**(Note: the OrderModifier class was designed for that purpose)**
